

Further strengthening our position within sustainability

Åsa Jackson, Senior Vice President Corporate Responsibility, Boliden
Stockholm, November 19th

Building a sustainable future

Today

Boliden is a world leader in sustainable metal production

This position has been achieved through innovation and modern technology, developed in partnership with technological and engineering companies.

Tomorrow

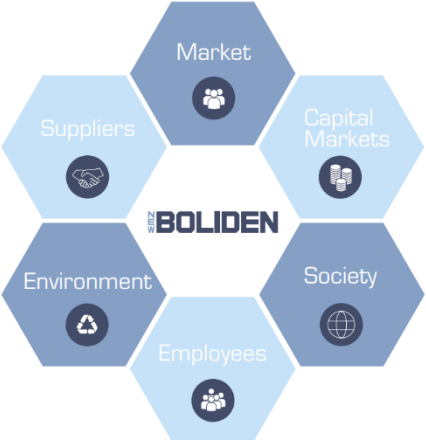

Boliden is the most sustainable metal producer and contributes to a sustainable society

We are part of a bigger eco-system and we are dependent on your deliveries and performance to reach world class.

Sustainability is part of everything we do

THE GLOBAL GOALS
For Sustainable Development

- PRIORITIZED AREAS**
- 1 People and partners**
 - 2 Environment and climate**
 - 3 Innovation and improvement**
 - 4 Responsible business**

Passion for improvements * Personal commitment * Value chain responsibility

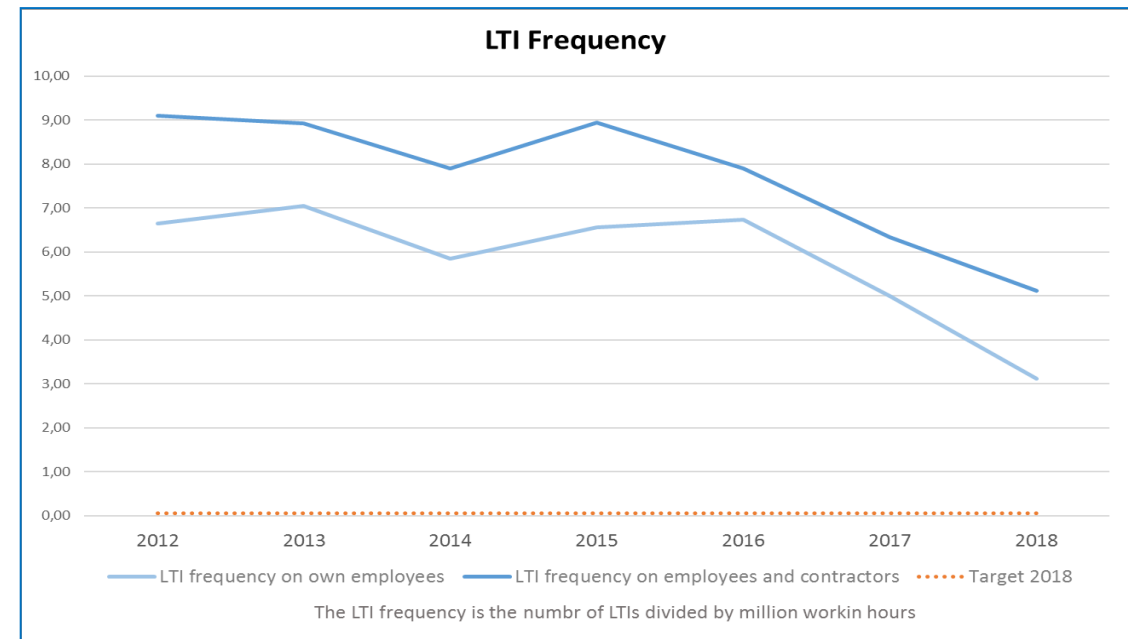

Safety first

Continuous improvements in the safety area

- We have together with our contractors reduced accident rates by 44% between 2012-2018
- In Q2 2019, Boliden had the lowest accident rate for a quarter ever - a total of 1.4 (employees + contractors)
- Severity rate is decreasing
- We must continue to improve, and we believe zero accidents is possible

Focus going forward is to strengthen culture and behaviors

Increased focus on high risk incidents and reporting

- Serious incidents, risk class 3 incidents (RC3), cause the greatest danger to human life and health
- Therefore, Boliden focuses on RC3 incidents and proactive risk reporting

Continued focus on leadership, engagement and health

- Employee engagement and high performance leadership lead to a strong culture as well as healthy and safe workplaces
- We have started to follow up on pro-active metrics such as the employees' level of involvement within the safety work
- Stress causes both accidents and sick leave, why preventative work within the psychosocial work environment is high on the agenda

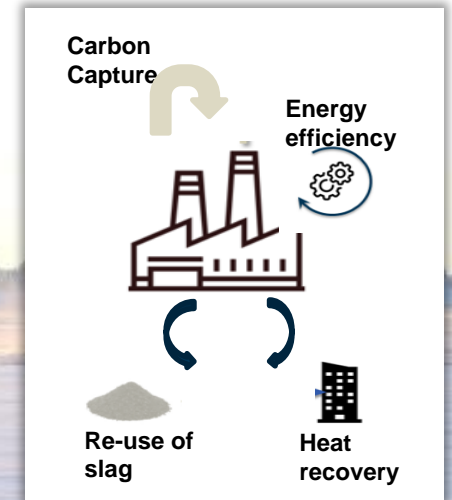

We continue to improve environmental performance

Reduction of carbon dioxide is a high priority

- Reduced emissions and incidents during the recent years within all environmental focus areas
- Increased focus on the CO2 challenge

Boliden has an important role to play in reducing climate impact

Long-term climate target

Reduce greenhouse gas emissions by 40% measured in CO₂ intensity from 2012 to 2030

Vision

Climate neutral production & Fossil free mines

We secure value chain responsibility by ethical and responsible business

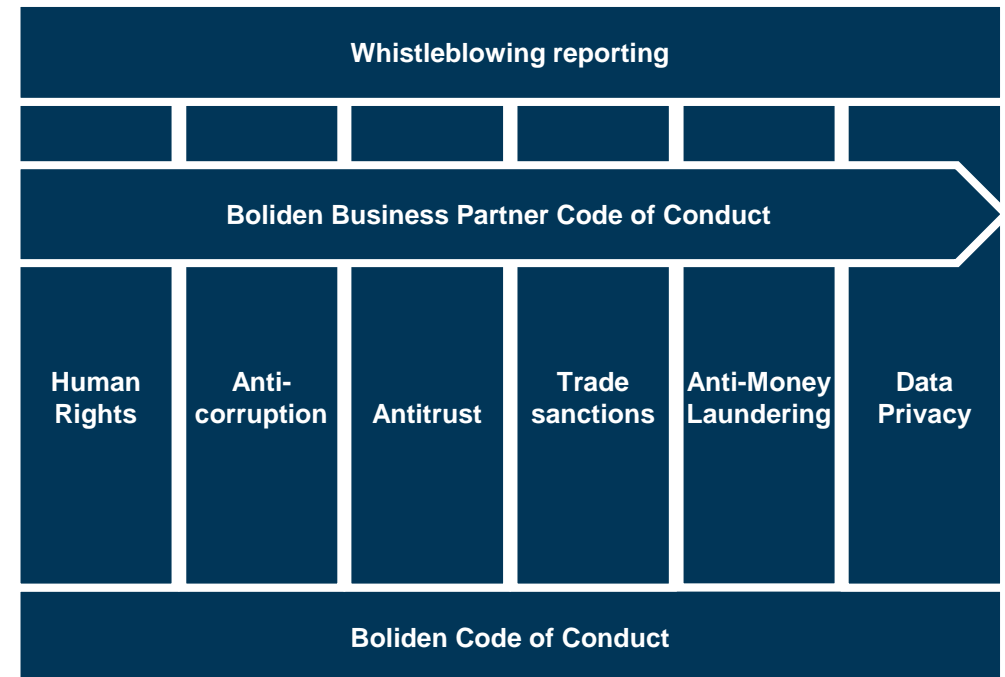

Ensuring business responsibility within our own organisation

- Setting high standards regarding ethical behaviors and business integrity in all parts of our business through our Code of Conduct
- Increased focus on ethics and compliance by new function and program

Taking responsibility for the value chain

- Requiring the same high ethics and business integrity standards from our suppliers and customers through our Business Partner Code of Conduct
- Transparency and traceability throughout the supply chain
